

YouTRACK 3.0

The Intelligent Issue and Bug Tracker from JetBrains

"Everyone at MindTouch loves YouTrack! Being this productive was simply not possible before. It's been the most successful technology roll-out in the company since Salesforce! Keep up the great work (especially on the API side)!"

Steve Bjorg,
Founder and Chief
Technology Officer,

Key Facts

JetBrains YouTrack is an intelligent, keyboard-centric issue and bug tracker. It helps software developers perform most of their issue-handling tasks with two simple, keyboard-driven controls: a search box and a command window.

In YouTrack search box, you enter Google-like search queries aided by suggestions and highlighting. This lets you find or filter out any subset of issues in no time, concentrating on the task at hand.

Powerful YouTrack commands help you modify multiple issues simultaneously. For example, you can mark 10 issues as being in progress, raise their priority, and specify a product version that they affect — instantly.

Key Benefits

Commands protect YouTrack from UI bloating, efficiently replacing zillions of buttons, drop-downs and check boxes with a compact, flexible issue modification tool. Command syntax is similar to that of YouTrack search queries, so you can familiarize yourself with both very easily.

The set of issue attributes along with their values is completely customizable in YouTrack. You can define your own set of issue attributes for every project: define your own set of issue States, add Severity, set Assignee field to be a multi-selection field, and much more.

You can also create custom workflows to define the life-cycle of your issues based on your specific process needs. For example, you can set up the rule to assign an issue to the QA team or specific QA person automatically when issue state is changed to Fixed. Or you can require defining the build number when closing an issue. With customizable workflow and customizable attributes, you have the power to create the issue tracking process.

Key Features

- Report issues with a single shortcut from anywhere within YouTrack.
- Simple keyboard shortcuts for creating, editing, and navigating between issues.
- Powerful YouTrack REST API.
- Mailbox integration for submitting issues from e-mail.
- Integration with JetBrains TeamCity.
- Integration with LDAP, and OpenID for easier access control.
- Integration with VCSs through TeamCity and native GitHub integration.
- Integration with TestLink and TestRail.
- Import existing projects from any bug tracker.
- Mobile UI for accessing and handling issues from a mobile device.
- AJAX-based user interface for extremely fast issue handling.
