

# Accessing Module Settings

---

## To access module settings

1. Open the [Project Structure dialog](#).
2. In the left-hand pane, under **Project Settings**, click **Modules**.
3. In the area under **+ -**  , select the module of interest.

The [Module page](#) opens in the right-hand part of the dialog showing the module settings. Configure the settings as required.

To access the module settings, you can select the desired module in the [Project tool window](#), [Dependency Viewer](#), or the [Module Dependencies tool window](#), and then do one of the following:

- Choose **Open Module Settings** in the context menu.
- Press **Ctrl+Enter**.
- Press **F4**.
