

# Add Composer Dependency Dialog

---

Tools | Composer | Add Dependency

In this dialog box, appoint the packages to be added to the current project.

Item	Description
Available packages	From this list, select the package that you need in your project. The list shows all the available packages, however, the packages that have been already installed are marked with a tick. Use the search field, if necessary: start typing the search string, as you type, the list dynamically reduces to show the packages that match the entered pattern. The <b>Description</b> read-only text box briefly explains the functionality of the selected package.
Version to install	From this drop-down list, select the package version. The contents of the list depend on the specific package.
Install	When you click this button, IntelliJ IDEA starts downloading the appointed package. When the process is completed, IntelliJ IDEA creates a new folder under the <b>Vendor</b> node stores the downloaded package in it, and adds the package to the list in the <code>require</code> section of <code>Composer.json</code> .
