

## Adding an Existing Module to a Project

---

You can add existing modules to a project. Normally, you do that to add a module from a different project.

### To add an existing module to a project

1. [Open the project](#) you want to add a module to, and select **File | Import Module**.
2. In the [dialog that opens](#), select the module of interest (represented by the corresponding [.iml module file](#)), and click **OK**.
