

Adding Auto-Detected Facets

IntelliJ IDEA is capable of auto-detecting facets. As soon as it finds a file or a directory typical of a certain framework or technology, you get a notification looking similar to this:

By clicking **Configure**, you can start creating the corresponding facet or facets.

This task can also be initiated from within the [Event Log tool window](#), which will contain a similar notification message.

To create detected facets

1. Click **Configure** in the notification box.

Alternatively, open the **Event Log** tool window, find the corresponding notification message there, and click **Configure** within the message.

To open the **Event Log** tool window, click  on the status bar or **Event Log** on the tool window bar. Both these controls are located in the lower-right corner of the main window.

2. In the **Setup Frameworks** dialog that opens, select the facets to be created and the files to be associated with these facets.

(The facets are at the top hierarchical level in this dialog; the corresponding files are shown as facet elements, at the second level.)

Click **OK**.
