

# Adding Gant Scripts

---

IntelliJ IDEA lets you add Gant scripts for Groovy, Grails and Griffon projects.

For Groovy projects you need to specify the location of the [Gant home directory](#) in **Project Settings | Gant** before adding the Gant scripts.

## To add Gant Scripts

1. In the Project tool window, right click the directory where you want to create a Gant script file.
2. Select **New | Gant Script** from the context menu.
3. In the **New Gant Script** dialog, specify the name of the script and click **OK**.
4. IntelliJ IDEA creates a Gant file with the default target.
