

Adding WS Libraries to a Web Service Client Module Manually

This approach is applicable if the necessary libraries have been previously downloaded.

To add the necessary libraries to an existing module

1. [Open the Module Settings](#) dialog box.
2. With the desired module selected, click the **Dependencies** tab.
3. Click the **Add** button again, then select **Single-Entry Module Library** from the context menu. In the [dialog that opens](#), select the `javaee.jar` library and the required Web service-specific libraries.

1. The location of the `javaee.jar` library is defined during the installation of IntelliJ IDEA.
2. The location of the Web-service specific libraries is defined during their download.

4. Click **OK** when ready.
