

AspectJ Facet Page

File | Project Structure | Modules - module - AspectJ facet

The page is available only if the following [plugins](#) are enabled:

- Spring-AOP and @AspectJ Support.
- AspectJ Support.

Use this page to specify the module-specific command-line option `aspectpath` for the AspectJ compiler [ajc](#).

Item	Shortcut	Description
Override project aspect path		Select this check box to override the <code>aspectpath</code> specified at the project level. Use the available controls (see below) to form the module-specific <code>aspectpath</code> .
	Alt+Insert	Use this icon or shortcut to add project and global libraries, and/or the modules that the current module depends on. Select Library or Module , and then select the necessary libraries or modules in the Choose Libraries or the Choose Modules dialog.
	Alt+Delete	Use this icon or shortcut to remove the selected items from the list.
	Alt+Up	Use this icon or shortcut to move the selected item one line up in the list.
	Alt+Down	Use this icon or shortcut to move the selected item one line down in the list.
