

Associating Ant Target with Keyboard Shortcut

You can associate a build target with a keyboard shortcut and execute commonly-used targets with a single key-stroke. If an Ant build file is added to the project, its targets appear under the **Ant Targets** node in the [Keymap](#) dialog box.

To associate a keyboard shortcut with a build target

1. In the [Ant Build Tool Window](#), right-click the desired build target.
2. On the context menu, choose **Assign Shortcut**. [Keymap](#) dialog is opened.
3. Configure keymap, as described in the section [Configuring Keyboard Shortcuts](#).
