

Binding a Form to a New Class

When all components are cleared, or the Form node is selected in the Component Treeview, the form's properties the Inspector displays properties of the form.

To bind a gui form to a not-yet-existing class

1. Select the desired form in the Form Workspace or in the Components Treeview.
2. In the **bind to class** field, type the fully qualified name of the new class. Intention action icon appears suggesting you to create the specified class.
3. Click the intention action icon, or press Alt+Enter. The desired class is created in the specified location.
