

Changing Color Values in Style Sheets

In addition to the editing techniques that are common for all file types, IntelliJ IDEA provides specific techniques for *CSS*, *SASS*, *SCSS* and *LESS* files. In particular, it is possible to easily change color values without the necessity to memorize and type color codes. The `color` properties are marked with the icons of the corresponding color in the left gutter area of the editor. Use these icons to view colors and change color values. When you point with your mouse cursor to the color icon, the pop-up window appears, showing the color and its code.

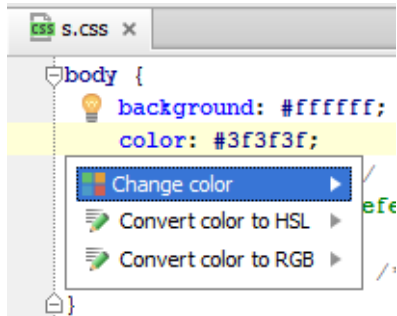

To choose color value in a style sheet

1. Open the desired style sheet for editing.
2. Type `color:`, and then press `Ctrl+Space`.
3. Select the desired color value from the suggestion list, or **choose color...** to pick a custom one:

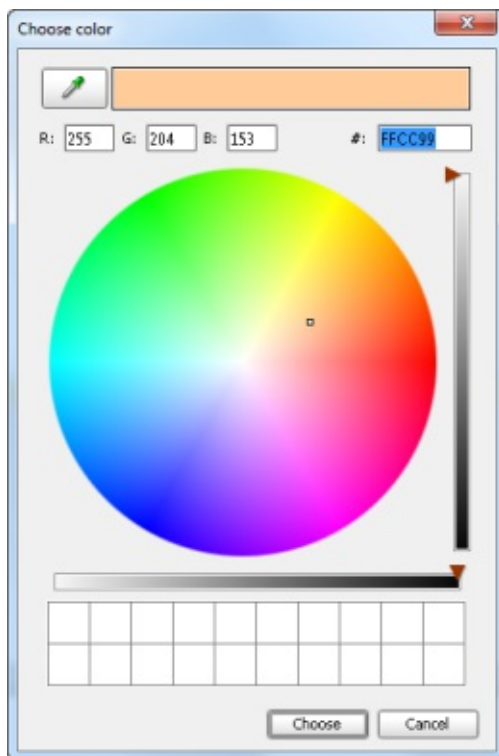

To change color value in a style sheet

1. Open the desired style sheet for editing, and locate color property to be changed.
2. Do one of the following:
 - If the color icon is **shown**, just double-click is in the left gutter of the editor.
 - If the color icon is **not shown**, then press `WHYYYYYShortcut Missing`, or click  to reveal the list of intention actions, and choose *Change color* intention action:

3. In the **Choose color** dialog box, pick the desired new color, and click **Choose**:
