

Check Out from CVS Dialog

VCS | Checkout From Version Control | CVS

The dialog consists of the following pages:

- [Select CS Configuration](#)
- [Select CVS Element to Check Out](#)
- [Select Checkout Location](#)
- [Check out to](#)

Select CVS configuration

Item	Description
List of available CVS configurations	Use this list to select the desired CVS configuration.
Configure	Click this button to define a new CVS configuration, or modify an existing one, in the CVS Roots dialog box.

Select CVS element to check out

Use this page to select elements of the repository to check out. **Next** button is only available when an element is selected.

Select checkout location

Use this page to specify the target location for the artifacts to check out. All actions can be performed using the toolbar buttons, or context menu.

Item	Shortcut	Description
	Ctrl+1	Navigate to the user home.
	Ctrl+2	Navigate to the project root directory.
	Alt+Insert	Create a new directory, where the files will be checked out to.
	Delete	Delete selected directory.
	Ctrl+Alt+Y	Synchronize with external changes.

Check out to

Use this page to define CVS-specific checkout options.

Item	Description
List of local paths	Select the local path to which the module name should be added.
Make new files read-only	Check this option to set read-only attribute for the files that did not exist locally but were checked out from the repository.

Item	Description
Prune empty directories	Check this option to delete empty directories from the repository.
Change keyword substitution to	Check this option to enable keyword substitution, and select the desired substitution mode from the drop-down list.
