

Checking Git Project Status

Besides indicating the [current file status](#) relative to the repository, IntelliJ IDEA integration with Git provides you with the accumulated view of the project files' statuses.

To view differences between the current state of the project files and the repository

1. Open the required project.
2. On the main menu, choose **VCS | Refresh File Status**.
3. Switch to the **Changes** tool window.

The status of each file is indicated by the [color](#) in which the path to the file is displayed.
