

## Checking SVN Project Status

---

Besides indicating the [current file status](#) relative to the repository, IntelliJ IDEA integration with SVN provides you with the accumulated view of the project files' statuses.

**To view differences between the current state of the project files and the repository**

1. Open the required project.
2. On the main menu, choose **VCS | Refresh File Status**.
3. Switch to the **Changes** tool window, tab **Local**.

The status of each file is indicated by the [color](#) in which the path to the file is displayed.
