

Checkout from TFS Wizard: Checkout Mode

VCS | Checkout from Version Control | TFS

On this page, choose the way to map the files and folders on your server with their local copies. These mappings are referred to as [workspaces](#). You can either specify new mappings and have a new workspace generated or use mappings from an existing workspace.

Item	Description
Create workspace automatically	Choose this option to have IntelliJ IDEA generate a workspace for you, with the folder mapping based on your choice of the local and remote paths .
Workspace name	In this text box, type the name of the workspace to be generated.
Choose workspace manually	Choose this option to have the data downloaded according to the mappings from an existing workspace.
