

# Choose Device Dialog

---

Tools | Run

Tools | Debug

---

The dialog box opens when you start a run or debug session with manual selection of the target device specified in the run/debug configuration. The dialog box shows a list of all currently running devices, both actual and virtual.

Use this dialog box to appoint an actual or a running virtual device as well as for launching virtual devices.

Item	Description
Serial Number	This read-only text box displays the serial number assigned to a device by the manufacturer.
AVD name	This read-only text box displays the name of a device.
State	This read-only text box displays the current status of a device.
Compatible	This read-only text box displays the Android platforms with which a device is compatible.
Refresh	Click this button to refresh the list of running devices.
Launch Emulator	Click this button to open the <a href="#">Select Android Virtual Device</a> dialog box to start an existing virtual device.
