

Choose Servlet Class

Web Module Editor - General - Servlet Initialization Params

The dialog opens when you select a servlet in the **Servlets Configured** pane and click **Change Class** in the **Servlet Initialization Params** that opens.

Use this dialog to select the class that implements the selected servlet.

The dialog contains two tabs:

- [Search by Name](#)
- [Project](#)

Search by name tab

Use the tab to search a relevant class to implement the servlet. Specify the class name or part of the name.

Item	Description
Search pattern area	The text field for typing a part of the name of the relevant class.
Search results area	Shows a list of classes that meet the search pattern. The contents of the area change dynamically as you type.
Include non-project classes	Involves classes outside the current project into the search.

Project tab

Use this tab to select the relevant class in the project tree.
