

# Cleaning up Local Working Copy

---

The *Cleanup* command in Subversion can be helpful in the following cases:

- Your local working copy is in an inconsistent state because a Subversion command has been interrupted.
- The timestamp of a file has changed while its content remains intact.

**To clean up the local working copy, do one of the following**

- Select the desired file or directory in the **Project** tool window and choose **Subversion | Cleanup** on the context menu of the selection.
- Open the desired file in the editor and choose **VCS | Subversion | Cleanup** on the main menu.
- Select the desired file or directory in the **Local** tab of the **Changes** tool window and choose **Subversion | Cleanup** on the context menu of the selection.
