

# Code Style: EJS

File | Settings | Code Style - EJS

On this page, configure formatting options to be applied within [EJS](#) inclusions in your code. IntelliJ IDEA recognizes such inclusions based on these delimiters specified on the [EJS](#) page of the **Settings** dialog box. The default delimiters are `<%` and `%>`. For more details about using *EJS*, see [http://embeddedjs.com/getting\\_started.html](http://embeddedjs.com/getting_started.html).

View the result in the **Preview** pane.

Item	Description
Spaces within execute tag	Select this check box to have spaces inserted between the opening ( <code>&lt;%</code> ) and closing ( <code>%&gt;</code> ) delimiters and the template body inside them. Otherwise, the template body is not separated from the delimiters.
Spaces within execute and get escaped tag	Select this check box to have spaces inserted between the template body on the one hand and the opening/closing delimiters or <i>escape tags</i> ( <code>=</code> ) on the other. Otherwise, the template body immediately follows and precedes the delimiters and tags.
Spaces within execute and get unescaped tag	Select this check box to have spaces inserted between the template body on the one hand and the opening/closing delimiters or <i>unescape tags</i> ( <code>==</code> ) on the other. Otherwise, the template body immediately follows and precedes the delimiters and tags.
Spaces within generate tag	Select this check box to have spaces inserted between the template body on the one hand and the opening/closing delimiters or <i>generate tags</i> ( <code>%</code> ) on the other. Otherwise, the template body immediately follows and precedes the delimiters and tags.
Spaces within filter tag	Select this check box to have spaces inserted between the template body on the one hand and the opening/closing delimiters or <i>filter tags</i> ( <code>%=:</code> ) on the other. Otherwise, the template body immediately follows and precedes the tags.
Before ':'	Select this check box to have a space inserted before a colon ( <code>:</code> ).
After ':'	Select this check box to have a space inserted after a colon ( <code>:</code> ).
Chain ' '	Select this check box to have spaces inserted before and after a vertical bar ( <code> </code> ).
