

Comparing Data Sources

To compare data sources

1. In the [Database tool window](#), select two data sources, schemas, or tables to be compared.
2. Select  **Compare** from the context menu, or press **Ctrl+D**.
3. Explore the differences in the [Differences viewer](#).

If necessary, you can also open the **Difference viewer** without running IntelliJ IDEA. This is done through the following command:

```
<path to IntelliJ IDEA executable file> diff <path_1> <path_2>
```

where <path_1> and <path_2> are the paths to the database objects in question.
