

## Comparing with Branch

---

In addition to the common file versions comparison operations, Subversion integration provides a special command that enables you to compare a file from your local working copy with the version in a certain branch.

### To compare a file with the specified branch version

1. Select the desired file in the Project tool window, or open it in the editor.
2. On the main VCS menu, or on the context menu of the selection, choose **Subversion | Compare with Branch**.
3. In the Compare with Branch pop-up window, select the desired branch. The Compare with Branch dialog in the form of a [Differences Viewer](#) appears.

This action is also available in the SVN Repositories browser. Right-click the desired directory and choose the command on the context menu.
