

Compiling Target

To compile all source files in a specified target

1. Select a file, module, or package.
2. On the main menu choose **Build | Compile 'target'**, or press **Ctrl+Shift+F9**.
 - When called from the editor, this method compiles the current file.
 - You can compile any module separately. All modules the current one depends on will be compiled as well.
 - To cancel the process, do one of the following:
 - Middle-click on the progress bar
 - Click 
 - Press **Ctrl+F2**, and select the process from the pop-up menu.
