

Configuring Abbreviation Expansion Key

Shortcut key for expanding Emmet selectors and Zen Coding live templates is configurable. You can [re-define this default setting](#) for each specific live template.

To configure a shortcut to expand abbreviations

- To specify the shortcut to apply to abbreviations, open the [Emmet](#) page of the **Settings** dialog box and choose the desired option from the **Expand abbreviation with** drop-down list.

To configure a shortcut to expand a live template with

1. To re-define the expansion key for a live template, open the [Live Templates](#) page, expand one of the the **Zen Coding** nodes, and select the desired template. The focus moves to the [Template Text](#) area.
2. From the **Expand with** drop-down list, select the key to expand the template with.

This setting does not override the [default setting](#) specified for native Emmet support; you will just get the ability to expand the template using either of the specified keys.
