

# Configuring Artifacts: General Settings

---

## To specify the general settings of an artifact

1. In the **Name** text box, specify the name of the current artifact.
2. If necessary, change the artifact type in the **Type** drop-down list. The type specified during the artifact creation is pre-selected.
3. In the **Output Directory** text box, specify the target location of the artifact.
4. To have the artifact built upon project make, select the **Build on Make** check box.
