

Configuring Intention Actions

IntelliJ IDEA makes it possible to configure intention action settings either in the [Intentions](#) page of the Settings dialog, or "on-the-fly".

In this section:

- [To configure intention settings using the Settings dialog](#)
- [To configure intention settings on-the-fly](#)

To configure intention settings using the settings dialog

By default, all available intention actions that ship with IntelliJ IDEA, are enabled. By changing the Intention Settings, you can disable the actions that are not required for your current working environment.

1. On the main menu, choose **File | Settings** .
2. Under the **IDE Settings** node, select **Intentions**.
3. In the [Intentions](#) page, clear the check boxes of the intention actions or action categories that you do not currently need.

Selecting or clearing a category affects all intention actions in this category.

4. Apply changes and close the dialog.

To configure intention settings on-the-fly

1. In the editor, press **Alt+Enter** to reveal the inspection alert and suggestion list.
2. Select the action to be disabled, then click right arrow button or just press the right arrow key.
3. On the submenu, click **Disable <intention action name>**.
