

Configuring Service Endpoint

Service endpoint is defined for *Session beans*, versions 1.x, 2.x and 3.0.

Same as the other bean properties, the service endpoint can be defined by editing the source code, or using the tools provided by IntelliJ IDEA.

To configure a service endpoint

1. Open a session bean for [editing](#), and click **Change EJB Classes**.
2. In the **Change EJB Classes** dialog box, select the **Service Endpoint** check box and specify the to be used as an endpoint for calling services.

For bean specification prior to 3.0 you also need to [configure interfaces](#).
