

Configuring VCS-Specific Settings

Certain settings are applicable to the version control systems assigned to the [whole project, or its directories](#). The others are related to the selected version control systems. Use the respective VCS pages under the **VCSs** node of the [Settings](#) dialog box to define VCS-specific settings.

To configure VCS-specific settings, follow these general steps

1. Open the [Settings](#) dialog box and click **Project Settings**, then click the **Version Control** node.
2. Click a page that corresponds to the VCS to be configured.
3. Set up options as required. For detailed information, see [VCS-specific](#) pages of the Version Control settings.
