

Console Tab

View | Tool Windows | Version Control

The tab displays:

- Version control related commands generated based on the settings you specify through the IntelliJ IDEA interface.
- Results of executing version control related commands.

```
Version Control Console
git clone git://github.com/zaikina/idea-test.git idea-test-git-root1
Initialized empty Git repository in C:/Git/idea-test-git-root1/.git/
git clone git://github.com/zaikina/idea-test.git idea-test-git-root2
Initialized empty Git repository in C:/Git/idea-test-git-root2/.git/
git clone git@github.com:zaikina/gittest5.git gittest5-root1
Initialized empty Git repository in C:/Git/gittest5-root1/.git/
fatal: no matching remote head
git init
Initialized empty Git repository in C:/Git/continue-rebase-root1/.git/
```

The screenshot shows the IntelliJ IDEA console window with the title "Version Control Console". It displays a series of Git commands and their outputs. The first three commands are successful: cloning repositories from GitHub. The fourth command, cloning from a GitHub user, results in a "fatal: no matching remote head" error. The fifth command, a local "git init", is successful. At the bottom of the console window, there are four tabs: "6: TODO", "Version Control", "9: Changes", and "Web Preview".
