

Create Mercurial Repository Dialog

VCS | Create Mercurial Repository

Use this dialog box to create a local Mercurial repository in the folder of your choice.

Item	Description
Create repository for the whole project	Select this option to have a repository initialized in the project root directory. This option is helpful if you want to put the entire project under Mercurial control.
Select where to create repository	Select this option to have a repository initialized in one of the folders below the project root. With this option, you can have folders of your project under control of different version control systems. In the text box below, specify the folder to create the repository in. Type the path manually or click the Browse button  and choose the desired folder in the dialog that opens .
