

# Create Workspace

File | Settings | Version Control | TFS

The dialog box opens when you click the **Create** button or select a workspace and click the **Edit** button in the [Manage TFS Servers and Workspaces](#) dialog box.

Use this dialog box to define a new workspace or update the existing one by selecting the necessary folders on the TFS server and mapping them to local folders.

Item	Description
Name	In this text box, specify the name of the new workspace.
Comment	In this text box, describe briefly what this workspace is intended for.
Server	This read-only field displays the URL address of the TFS server on which the new workspace will be created and which is selected in the <a href="#">Manage TFS Servers and Workspaces</a> dialog box.
Owner	This read-only field displays your TFS user name.
Computer	This read-only field displays the name of your computer in the network domain.

## Working folders

In this area, define mappings between the necessary folders on the TFS server and local folders.

You can map a folder including all its subfolders recursively or map each subfolder separately.

Item	Description
Status	From this drop-down list, select the status of a new mapping.
Local path	In this text box, specify the path to the local folder. Use the  button, if necessary.
Server path	In this text box, specify the path to the corresponding folder on the server.
Add	Click this button to create a new mapping.
Remove	Click this button to remove the selected mapping from the list.
