

Creating a Project for Java Mobile Application Development

A [project](#) for Java Mobile application development, as any other project in IntelliJ IDEA, can be created from scratch. However, a Java Mobile project requires a special mobile [SDK](#) such as WTK or DoJa.

To create a Java Mobile project

1. If no project is currently open in IntelliJ IDEA, click **Create New Project** on the [Welcome screen](#). Otherwise, select **New Project** from the **File** menu.

As a result, the [New Project wizard](#) opens.

2. On the [first page of the wizard](#), in the left-hand pane, select **J2ME Module**.

3. In the right-hand part of the page, specify the project name and location.

4. Select the desired Mobile SDK from the **Project SDK** list.

If the list is empty or doesn't contain the SDK that you need, click **New** and select the installation folder of the required Mobile SDK in the [dialog that opens](#).

5. Specify [other settings](#) as necessary and click **Next**.

6. On the next page of the wizard, specify whether you want to create a directory for your source code.

7. On the next page of the wizard, specify a Mobile SDK for the [module](#). If you don't want to use the project SDK, click **Configure** and select the installation folder of the required Mobile SDK in the [dialog that opens](#).

8. On the [next page of the wizard](#), specify mobile SDK-specific options, and click **Finish**.
