

# Creating Code Constructs Using Surround Templates

---

This section describes how to wrap fragments of code according to [surround templates](#).

## To surround a block of code with a live template

1. In the editor, select the piece of code to be surrounded.
2. Do one of the following:
  - On the main menu, choose **Code | Surround With Live Template....**
  - Press **Ctrl+Alt+J**.
3. Select the desired surround template from the suggestion list.
