

Creating Grails Views and Actions

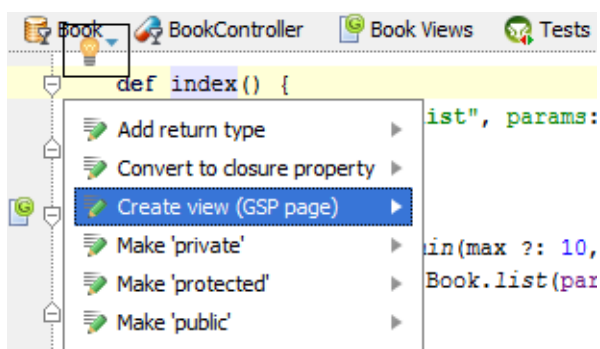

IntelliJ IDEA provides intention actions to create views and actions "from usage".

To create an action from a view

1. In a Grails *.gsp page, place the caret at a view that refers to a non-existent action.
2. Press Alt+Enter, and choose **Create Action** from the suggestion list. The action is created in the controller, with the caret at the insertion point.
3. Type the meaningful action code.

To create a grails view from an action

1. In a Grails controller, place the caret at an action that refers to a non-existent view.
2. Press Alt+Enter, and choose **Create View (GSP page)** from the suggestion list.

A .gsp file with the corresponding name is created under the `views` directory of the Grails application.

Configure code style of .gsp pages [here](#).
