

Creating Groovy Tests and Navigating to Tests

To create a test for a Groovy class

1. Do one of the following:
 - [Use intention action *Create test*](#).
 - Press **Ctrl+Shift+T**, and choose **Create New Test**.
2. In the Create Test dialog box, specify the required information, as described in the section [Creating Tests](#).

You can navigate between Groovy tests and test subjects (**Navigate | Test / Test Subject**). If a test class doesn't yet exist, IntelliJ IDEA suggests to create one.
