

## Creating Line Breakpoints

---

A line breakpoint  is a breakpoint assigned to a specific line in the source code.

Line breakpoints are used in the Java, JavaScript, and Flex source code.

Line breakpoints can be set on executable lines. Comments, declarations and empty lines are not valid locations for the line breakpoints.

In this section:

- [To create a line breakpoint](#)
- [Removing a line breakpointt](#)

### To create a line breakpoint

1. Place the caret on the desired line of the source code.
2. Do one of the following:
  - Click the left gutter area at a line where you want to toggle a breakpoint.
  - On the main menu, choose **Run | Toggle Line Breakpoint**.
  - Press **Ctrl+F8**.

### To remove a line breakpoint, do one of the following

- In the [Breakpoints](#) dialog box, select the desired line breakpoint, and click .
- In the editor, locate the line with the line breakpoint to be deleted, and click its icon in the left gutter.
