

Creating Test Methods

To create stub test methods in JUnit test classes, you can use the IntelliJ IDEA code generation feature.

To create a test class with a complete set of test methods and fixtures, use the [Create Test](#) intention action.

Creating a stub test method in a JUnit test class

1. Open the corresponding JUnit test class in the editor.
2. Place the cursor where you want a new test method to be generated.
3. Press **Alt+Insert** and select **Test Method** from the **Generate** menu.
