

Customize Threads View

Debug tool window | Frames tab | context menu | **Customize Threads View**

Use this dialog box to manage contents view and groupings of the Frames tab.

Item	Description
Show thread groups	If this option is selected, threads appear in a hierarchy of thread groups, allowing you to drill down into each group to access its member threads.
Show stack frames for synthetic methods	Specify whether you want stack frames for synthetic methods to be shown.
Move current thread to the top	Select this check box to keep current thread on the top of the list.
Show line number	If this option is checked the line number is displayed.
Show class name	Shows the name of the class containing the method.
Show source file name	Shows the name of source file that contains the method.
