

Defining Bean Class and Package

You can define the bean class and package by means of editing the source code, or use the tools provided by IntelliJ IDEA.

To define bean class and package

1. [Open the New Bean dialog box](#).

Alternatively, [open the desired bean for editing](#), and click the **Change EJB Classes** button.

2. In the **<ejb-name >** field, specify the bean name that will be complemented with a prefix and suffix configured in the [Java EE Names](#) tab of the [Global Code Style](#) dialog box.
3. In the **Package** field, specify the name of the package where the bean will reside. In the **EJB class** field, specify class name for this bean.
