

## Deployment: Excluded Paths Tab

---

Use this tab to configure a list of local and remote folders that you do not want to be involved in upload/download.

Item	Description
Add local path	Click this button to have an empty line added to the list and specify the location of the folder to be protected against upload/download. Type the path manually or click the <b>Browse</b> button  and choose the required folder in the <a href="#">dialog that opens</a> .
Add deployment path	Click this button to have an empty line added to the list. Click the <b>Browse</b> button  . The <b>Select remote excluded path</b> dialog box that opens shows the data on the host accessed through the selected server configuration. Select the required folder.
Remove path	Click this button to remove the selected item from the list. <div data-bbox="376 725 1394 819" style="border: 1px solid #ccc; padding: 5px; margin-top: 10px;">The button is only available when a line is selected.</div>
