

Designing GUI. Major Steps

The process of designing a graphical user interface involves the following typical steps:

- [Creating a new form or dialog](#)
- [Placing and arranging components in the form](#)
- [Defining properties of the components](#)
- [Binding components to the source code](#)
- [Making forms functional](#)
- [Localizing forms](#)
- [Previewing Forms](#)

You might want to review [basic concepts](#), and take a [brief tour of the tool](#), if you have not already done so.
