

## Diagram Preview

---

Use the Structure view as a Preview, that allows you to get a "10,000-feet" look on a diagram. The shadow area represents the visible part of a diagram. As you zoom in or out, or change the shape of the IntelliJ IDEA windows, the size of the shadow area changes accordingly.

### To enable the diagram preview

- Open the Structure tool window.

### In the Preview pane, the following actions are available:

- Keeping the mouse button pressed, move the shadow area to obtain the desired view.
- Select one or more nodes in the diagram, and the corresponding nodes in the Preview are marked dark gray.
