

Documentation Look-up in External JavaScript Libraries

Besides [common referential procedures](#) and [viewing JSDoc comments](#), you can also retrieve documentation for symbols defined in external JavaScript libraries and frameworks.

When this functionality is enabled, upon pressing `Shift+F1` with the cursor positioned at the symbol in question, IntelliJ IDEA invokes the corresponding link and opens the documentation page in the [default IntelliJ IDEA browser](#).

- The default IntelliJ IDEA browser is configured on the [Web Browsers](#) page of the [Settings](#) dialog.
- For more details on specifying the browser to use by default, see [Configuring Browsers](#).

To enable the external JavaScript library lookup functionality

1. Download the required libraries or frameworks.
2. [Configure the downloads as libraries](#) at the IntelliJ IDEA level.
3. [Specify links to external documentation](#).

To view documentation on a symbol defined in an external JavaScript library

- Position the cursor at the symbol in question and choose **View | External Documentation**, or press `Shift+F1`.
