

Edit Application Context Dialog

This dialog opens when you click **+** (Alt+Insert) or  (Enter) on the [Spring Facet page](#) in the **Project Structure** dialog.

Use this dialog for specifying the properties and contents of a [file set](#).

Item	Description
Name	Specify the name of the file set.
Parent fileset	If necessary, select a parent file set .
Content area	Shown in this area are the Spring configuration files existing in your module and associated libraries. (These may be XML files or @Configuration-annotated Java classes.) Use the check boxes to select or deselect the configuration files and groups of files.
Locate File	If you want to include a configuration file external to your module in the file set, click this button and select the necessary file in the Select Path dialog that opens.
