

## Edit Log Files Aliases Dialog

---

The dialog opens when you click the **+** or the  buttons in the **Logs** tab of the [Run/Debug Configuration dialogs](#).

Use this dialog to specify a file or a group of files that you want to be displayed on dedicated tabs of the [Run](#) or [Debug tool window](#).

Item	Description
Alias	In this text box, type the alias for the log entry. This alias will be displayed in the <b>Logs</b> tab of the <a href="#">Run/Debug Configuration: Application</a> dialog box and in the header of the dedicated tab of the <a href="#">Run</a> or <a href="#">Debug</a> tool window.
Log File Location	In this text box, specify the log files to display during running or debugging. Do one of the following: <ul style="list-style-type: none"><li>■ Specify the full path to a specific file. Type the path manually or click the <b>Browse</b> button  and choose the file in the <a href="#">dialog that opens</a>.</li><li>■ Specify the base directory and add an <a href="#">Ant pattern</a>  that defines the <a href="#">fileset</a>  to be displayed.</li></ul>
Show All Files Coverable by Pattern	Select this check box to have IntelliJ IDEA open a separate dedicated tab for each log file that matches the specified pattern.

Please note the following:

- If no alias is specified, the dedicated tab header shows the path to each log file.
- If a pattern covers more than one file, the tab header shows the name of the file instead of the log entry alias, even if an alias is specified.
