

EJB Editor General Tab - Common

EJB Tool Window | context menu of a bean | [Jump to Source](#)

The fields in the **General** section are available for all bean types.

Item	Description
Display name	Use this field to change the display name of a bean.
Description	Use this field to type optional textual description of a bean.
EJB Classes	These fields are available for all bean types.
Change EJB Classes	Click this button to open the bean-specific Change Bean dialog , where you can define the classes that comprise a bean: bean class, local and remote interfaces, and primary key class.
Rename EJB and Classes	Click this button to change the name of the bean and propagate this change to all the constituent classes of the bean. This renaming is performed as the Rename Refactoring .
