

## EJB Remote References

Web Tool Window | Context Menu of a Web module | Jump To Source | Assembly Descriptor References

In this pane, define the `<ejb-ref>` element that refers to the resource of an EJB.

Based on the settings you specify in this pane, IntelliJ IDEA generates the properties of the `<ejb-ref>` element in the `web.xml` descriptor.

Item	Property generated in <code>web.xml</code>	Description
EJB Remote References	<code>&lt;ejb-ref-name&gt;</code>	In this field, specify the name of the EJB used in the code of the Web application.
		Click this button to open the <a href="#">Edit EJB Reference</a> dialog box. <div style="border: 1px solid #ccc; padding: 5px; margin-top: 5px;">The button is available only in a selected row.</div>
Type	<code>&lt;ejb-ref-type&gt;</code>	Use this drop-down list to select the expected Java class type of the referenced EJB. The available options are: <ul style="list-style-type: none"><li>■ Entity</li><li>■ Session</li></ul>
Description	<code>&lt;description&gt;</code>	In this field, provide a description of the EJB remote reference.
Home	<code>&lt;home&gt;</code>	In this field, specify the fully qualified class name of the referenced EJB home interface.
Component	<code>&lt;remote&gt;</code>	In this field, specify the class that implements the referenced EJB component.
Link	<code>&lt;ejb-link&gt;</code>	In this field, specify the <code>ejb-name</code> of the EJB in an encompassing J2EE application package.
