

# Enabling an Extra WS Engine (Web Service Client Module)

---

Besides most common WS engines, support of which is [enabled through dedicated facets](#), with IntelliJ IDEA you can also use the following ones:

- [Apache Axis2](#)
- [XFire 1.X](#)/[CXF](#)
- [JBossWS](#)
- [WebSphere 6.X](#)

Moreover, you can use any desired WS engine implementation version instead of restricting yourself to the predefined one.

## To enable support of an extra ws engine or a specific implementation version

1. Download the desired WS engine implementation.
2. Specify the WS engine location on the [Web Services](#) page of the [Settings](#) dialog box.
3. On the main menu, choose **Tools | Web Services | Enable Web Service Support**.
4. In the [Enable Web Services Support](#) dialog box that opens specify the following:
  - From the **Type** drop-down list, select **Client**.
  - In the **Choose Module** drop-down list, specify the module to enable Web service client support in.
  - From the **Web Service Platform** drop-down list, select the desired implementation.
  - To have a sample class generated, select the **Add sample code** check box.
