

Enabling AspectJ Support Plugins

To be able to use the AspectJ support in IntelliJ IDEA, you have to make sure that the following [plugins](#) are enabled:

- [Spring-AOP and @AspectJ Support](#).
- [AspectJ Support](#).

In addition to that, you should also [create a library for aspectjrt.jar](#).

To make sure that the necessary plugins are enabled

1. [Open the Settings dialog](#).
2. In the left-hand part of the dialog, under **IDE Settings**, select **Plugins**.
3. On the [Plugins page](#) that opens in the right-hand part of the dialog, make sure that **All plugins** is selected in the **Show** box, and type `aspectj` in the search field.
4. Make sure that the check boxes to the left of **AspectJ Support** and **Spring-AOP and @AspectJ support** are selected.
5. Click **OK** in the **Settings** dialog.
6. Select to restart IntelliJ IDEA if so asked.
