

# Enabling GWT Support

---

IntelliJ IDEA supports the use of Google Web Toolkit through the [dedicated GWT Facet](#). Before you enable GWT support, make sure [GWT SDK](#) is downloaded and installed on your computer.

When you have downloaded and installed GWT SDK, there are several ways to enable the GWT support, depending on your context:

- [Create a module](#) with a dedicated GWT facet.
- [Attach a GWT facet](#) to an existing module.

To have IntelliJ IDEA pick the path to the GWT installation folder every time you enable GWT support for a module, specify this path in the default GWT facet settings.

## To configure default path to the GWT

1. Open the **Project Structure** dialog (Ctrl+Shift+Alt+S).
2. Go to **Facets**, and select **GWT**.
3. In the **Defaults** tab, specify the path to the GWT installation folder. Click **OK**.
