

# Enabling JavaScript Unit Testing Support

---

With IntelliJ IDEA, you can run and debug unit tests using one of the following *test runners*:

- [JSTestDriver](#)
- [Karma](#)

To write unit tests that are recognized and processed by these test runners, use the following JavaScript unit testing frameworks:

- [JSTestDriver Assertion](#) framework. The framework libraries are bundled with the JSTestDriver plugin.
- [Jasmine](#).
- [QUnit](#).
- [Mocha](#)

In this part:
